Test Charter

Explore the **Shopping Cart** feature to identify inconsistencies, usability issues, or potential defects when adding, updating, and removing products under various scenarios.

Test Objectives

- Verify that users can add one or multiple products to the cart.

- Validate cart data (name, quantity, price, total) accuracy.

- Test behavior when updating product quantity.

- Check how cart behaves after logout, login, and page refresh.

- Assess cart behavior for guest vs. logged-in user.

- Examine cart persistence, UI responsiveness, and error handling.

Test Scenarios & Observations

ID	Test Scenario	Step	Observations / Bugs / Notes

TC-001	Open cart when cart is empty	Open Home page > click chart button	Clear information text about chart is empty is exist; Link for directing user to product page is exist and valid.
TC-002	Add single product to cart for a logged-in users	Login > Go to Products > Click *Add to cart* > View Cart	Product appears correctly; price & quantity are accurate; "View chart" button need a better design for visibility and ease of use; Pop up success added will be better if auto closed
	Add multiple different products for a logged-in users	Add 3 unique items with from product list	All items correctly listed; totals correct
TC-003	Discard product from chart	Add some unique item from product list > open chart > click close "X" button	Item successfully removed from chart; remove item response time to slow.
TC-004	Check total price for an item with some quantity	Add item with specific quantity > go to chart	Total price is correct according to quantity and item price
TC-005	Proceed to checkout page	add some unique item > go to chart > click on "proceed to checkout" button	all selected item are remaining same; have correct quantity; have correct total price and amount
TC-006	Update item quantity in cart page	add a item > go to cart	User can't add quantity
TC-007	Add item with high quantity to cart	go to product page > select item > input maximum number of quantity > go to cart	No item stock check; user can input a absurd quantity
TC-008	Try to add item to cart for a guest user	Go to Products > Click *Add to cart* >	Product appears correctly; price & quantity

		View Cart	are accurate;
TC-009	Try to remove item form cart for a guest user	Go to Products > Click *Add to cart* > View Cart > click "X" button > refresh page	User notice that for guest user item still remaining after user try to remove it

Issues/Concerns Found

1. No stock-level validation shown in UI — all products can be added endlessly.

2. Bad user journey when user try to add more quantity through chart page; user unable to directly add more quantity in chart page

3. Bad response time during remove item from cart

4. For guest user, he can't remove item from his cart

Screenshots / Attachment

No stock validation bug attachment.

No "+" or "-" button for adjust item quantity
